CONTRIBUTORS

Guillermo Julio Alvear was an academic at the University of Chile (1960–1976 and 1988–2008), Director of the Department of Forestry (1969–70), and Forest Resources Management (1989–1993). He has also been Director of School of Forestry (1996–1998) and Dean (1999–2006) and Academic of the Austral University of Chile (1968–1995); Director of the Institute of Forestry (1974–1976); Director, Institute of Forest Management and Economics (1979–1980) and Director of the Experimental Forest (1981). Professionally he served as Chief of the National Forest Fire Protection (Ministry of Agriculture, 1967–1969), Executive Director of the National Forestry Corporation (1970–1973) and Executive Director of Forest Institute (1990). His academic activity has been developed mainly in undergraduate and postgraduate teaching and research in the area of Forest Fire Protection. He has authored 210 articles written between journals, books, book chapters, and national and international conferences.

Nikolaos Boukas holds a Ph.D. in Tourism Management from the University of Exeter, UK. He is currently a Lecturer in Hospitality and Tourism Management and Program Coordinator of Hospitality Management at the European University Cyprus in Nicosia. He is also a Collective Director of the Center for Sustainable Management of Tourism, Sport and Events (CESMATSE) of the European University-Cyprus.

George Boustras is a Ph.D. in Probabilistic Risk Assessment from CFES at Kingston University, London. He has worked as a Consultant and in Managerial Positions in the Industry. He has been an Honorary Research Fellow at CPSE, Imperial College and a KTP Research Fellow at FSEG, University of Greenwich. George has published his work in books, book chapters, journals and conference proceedings. George is currently an Associate Professor at European University Cyprus teaching Statistics in a Postgraduate level. He is founder and Director of the Center for Risk and Safety in the Environment (CRISE). He is a Chartered Scientist (CSci), a member of IChemE, IFireE, Greek Chamber of Engineers, Cyprus Chamber of Engineers, IAFSS, CYSHA, and he sits on the Health and Safety Committee of the Cyprus Chamber of Engineers. He is the Representative of the Republic of Cyprus in the Socio-Economic Committee of the European Chemicals Agency, the Coordinator of the Cyprus Safety Platform, and a National Correspondent at ETPIS.

Petra Buergelt is a research fellow with the Bushfire CRC, the University of Western Australia, and the Joint Centre for Disaster Research in New Zealand. She explores qualitatively and holistically how the interaction between psychological and environmental factors influences health, well-being, transformation, and adaptation in the face of major voluntary (migration) and involuntary (disaster) changes. Petra collaboratively designed and conducted various projects that studied preparedness for bushfires (Australia), tsunamis (USA) and avian influenza (NZ). Petra serves on the Editorial Board of the *International Journal of Multiple Research Approaches*. She has been awarded several scholarships and fellowships.

Geoff Cary was awarded a Bachelor of Applied Science (Hons) in Environmental Biology from the University of Technology Sydney, and a Ph.D. on the topic of landscape bushfire modelling from the Australian National University. Since 1996, he has convened bushfire science courses in the Fenner School of Environment and Society, and predecessor departments, at the ANU and supervised numerous Ph.D. and Honours students on a variety of bushfire-related topics. Dr. Cary's research encompasses empirical fire ecology, and simulation modelling of landscape fire dynamics with an emphasis on understanding effectiveness of fire management and likely impacts of climate change on fire regimes. He has been an Associate Editor and/or member of the Editorial Advisory Committee for the *International Journal of Wildland Fire* for the last decade, has served on several territory, state and federal bushfire advisory groups, and is a member of the Australian Bushfire Cooperative Research Centre.

Timothy W. Collins is an Associate Professor in the Department of Sociology and Anthropology at the University of Texas at El Paso. He received his Ph.D. in Geography (2005) from Arizona State University, where he was also a postdoctoral researcher (2005–2006) studying water resource conflict with the Decision Center for a Desert City. His research examines risks, hazards, disasters and environmental governance, and emphasizes issues of social vulnerability and environmental injustice. His master's and dissertation research focused specifically on wildland-urban interface fire hazard issues in California and Arizona; results from that research have been published in international peer-reviewed journals, including *Society and Natural Resources*, *Environmental Management*, *The Professional Geographer*, *Journal of Political Ecology*, and *Environmental Hazards*. His current research examines climate change vulnerabilities, environmental injustices, and environmental health disparities with funding from the U.S. National Science Foundation, National Institutes of Health, Environmental Protection Agency, and National Aeronautics and Space Administration.

Alison Cottrell is with the Centre for Disaster Studies (Deputy Director) and the Centre for Tropical Urban and Regional Planning in the School of Earth and Environmental Sciences at James Cook University in Townsville, Queensland, Australia. The focus of her research is the social impacts of broader social changes, hazards and climate change on communities. Perceptions of risk, vulnerability and resilience at

the individual, household and community levels are of prime concern. Recent research considers relationships between preparedness, recovery and resilience to hazards at the individual, household, neighbourhood, community, organisational and government levels. This research is linked to an assessment of appropriate strategies for enhancing community resilience to hazards in general. Current research is concerned with appropriate measures for assessing the impact of interventions that seek to promote community resilience. Her teaching activities include social impact assessment, disaster studies, cultural aspects of environmental issues, community studies and qualitative social research methods.

Christine Eriksen is a social geographer with the Australian Centre for Cultural Environmental Research at the University of Wollongong and a Fellow of the Royal Geographical Society with the Institute of British Geographers. Her research examines the role and place of local environmental knowledge in building resilience to natural hazards and maintaining sustainable land management practices. A major part of Christine's work focuses on wildfire awareness and preparedness amongst women, men, households, communities and agencies at the rural/wildland-urban interface. She follows women's and men's stories of surviving, fighting, evacuating, living and working with wildfire to reveal the intimate inner workings of wildfire response—and especially the culturally and historically distinct gender relations that underpin wildfire resilience. Christine's publications have appeared in *Geoforum*, *Journal of Rural Studies*, *International Journal of Wildland Fire*, *Australian Geographer*, *Geographical Journal*, *Journal of Geography in Higher Education*, and Sage's *Encyclopedia of Geography*.

Mai Frandsen is a Ph.D. candidate with the School of Psychology at the University of Tasmania. The focus of her research is to explore the psychological factors that promote bushfire preparedness and the capacity for agencies and communities to influence this. Action research, through the collaboration with the Tasmanian Fire Service, has allowed Mai to investigate the efficacy of engaging with communities to empower and foster community-driven bushfire preparedness. This research suggests that effective and sustained bushfire preparedness can be achieved if agencies collaborate with communities at a "grassroots" level.

A. Malcom Gill spent nearly five years in the United States (Harvard University in Massachusetts and Fairchild Tropical Botanical Garden in Florida) after undergraduate and graduate degrees from the University of Melbourne. Returning to Australia in 1971, he joined CSIRO Plant Industry in Canberra as a fire ecologist. He has been fully involved in fire research ever since. At present, he is a Visiting Fellow at the Fenner School of Environment and Society, Australian National University in Canberra. He is widely published in the scientific literature, both national and international, and has co-authored or co-edited a number of books. He was a member of the Victorian Bushfire Inquiry following the 2003 fires there and was an expert witness during the 2009 Victorian Bushfires Royal Commission. He was personally, socially and professionally involved in the 2003 Canberra fires.

Helen Goodman's career in human services has involved roles in a diversity of organizations. Her activities included direct practice as a social worker, some years as a manager of human services, membership of an administrative review tribunal (SSAT), post-graduate studies at the Masters and Ph.D. level, research and evaluation, and both research and practice in the field of Emergency Management. For several years Helen was a Research Fellow at RMIT in Melbourne with the Bushfire Cooperative Research Centre focusing on community safety. For two years following Black Saturday, she was with the Department of Human Services in Victoria, as the Hub Captain of the Kinglake Community Services Hub in the Bushfire Recovery Services Unit. Helen is currently working as a practitioner and researcher in services related to housing and homelessness. She is particularly interested in the intersection of public, community, and professional life. Her Ph.D. focused on barriers to learning environments in organizations.

Peter Hughes coordinates the Strategic Communications program at La Trobe University, Australia, where he teaches communication, media research, global communications, and documentary. His disciplinary background is in Media and Cultural Studies with a focus particularly on social constructions of reality in documentary film and television, and digital media (internet, social media) where he is particularly concerned with cultural questions to do with trust and risk in social media, emergency media and communications, and media discourses on global warming. He can be contacted at p.hughes@latrobe.edu.au.

Evaggelos "Vangelis" Katsaros is Scientific Associate for European and International Projects in Systems Optimization Laboratory, Department of Mechanical Engineer, University of Thessaly, Greece. He trained as a Chemical Engineer and has an M.Sc. in Industrial Management. He has over ten years experience working on Civil Protection projects at national and international levels, specifically in relation to bridging research and operations in civil protection-related fields and promoting cross border cooperation in all stages of civil protection cycle (with an emphasis on joint approaches to simulation exercises). He is currently engaged in doctoral research on optimizing decision-making during emergencies using tacit knowledge in emergency managers. Since 2010, he has been a Special Adviser on Safety, Security and Projects for the Greek railway company TRAINOSE S A. He has also acted as an evaluator in the FP7 Security theme of European Commission.

Damien Killalea is the Tasmania Fire Service's Director of Community Fire Safety, and is responsible for a range of strategies and programs to increase public safety from fire. As an end-user leader with the Bushfire Cooperative Research Centre's social research program, Damien helps bridge the gap between researchers and fire and land management agencies, shaping research and facilitating research adoption. Damien is a member of the Australasian Fire and Emergency Service Authorities Council's (AFAC) Community Safety Group, and plays a leading role in the development and review of national positions and strategies to improve public safety for bushfires as well as fires in the urban landscape.

Stefanos Michos is an Electrical and Computer Engineer, who received his diploma in 1991 and his Ph.D. in 1997 from the University of Patras, Greece. He had participated in 23 R&D National and European Projects from 1992 to 2000 undertaking the submission of proposals in National and European level, projects' management and development, and dissemination of their results. Since 2001 he has participated in about 50 Regional Development Projects. He is still technical manager in 2 European Projects, and he was a member of a Steering Committee in the Region of Western Greece (RWG) while he has participated in 7 other respective Committees. He was Head in the Regional Development Fund (RDF) of RWG, he is currently working for the Decentralised Administration of Peloponnese, Western Greece and Ionian. He has published 13 articles in national and international conferences, 4 articles in international journals and 1 article in an international publishing house.

Douglas Paton is a Professor (School of Psychology, UTas) and a Research Fellow at the Joint Centre for Disaster Research (New Zealand). He is a member of the Psychosocial Recovery Advisory Group for the Christchurch earthquake, the Integrated Research for Disaster Reduction Committee (UN-ISDR), the National Mental Health Disaster Response Taskforce (Australia), and a Principle Scientific Advisor to the Bushfire CRC. He was previously involved in developing resilience policy with UNESCO (Natural Disaster Preparedness in the Asia-Pacific program), NATO, the U.S. Government Accountability Office, and the Department of Prime Minister and Cabinet. Douglas's research focuses on developing and testing models of resilience (adaptive capacity) for natural hazards. An all-hazards and cross cultural approach is adopted with research being conducted in Australia (bushfire, flooding, tsunami), New Zealand (earthquake, volcanic), Japan (earthquake), Indonesia (volcanic), Taiwan (earthquake, typhoon), and Portugal (bushfire). Douglas has published 18 books, 70 book chapters and 130 peer reviewed articles.

Tim Prior is a Senior Researcher with the Risk and Resilience Research Group within the Centre for Security Studies, ETH Zürich. His research has focused on risk and decision-making under uncertainty, particularly in relation to individual, community and organisational preparation and response to environmental risk, and in relation to natural resource management. Tim's recent research has included work exploring the role of community engagement in wildfire preparedness risk communication, and foresight to inform decision-making in the long-term management of Australia's mineral resources. Tim currently manages a program of research examining the existence and nature of resilience in complex social systems, and particularly the factors or entities, and the relationships between these, that influence resilience in linked sociotechnical and socioeconomic systems. Tim has published his research in *Global Environmental Change*, *Current Opinion in Biotechnology*, the *International Journal of Wildland Fire*, the *Journal of Cleaner Production*, and the *Journal of Futures Studies* among others.

Natassa Pyrgaki has a Diploma of Science (Civil Engineering) and a Master of Sciences in Civil Engineering Infrastructure with concentration in Geotechnical

Engineering, University of Patras, Polytechnic School, Department of Civil Engineering. Natassa was the Project Coordinator–Manager on behalf of the Lead partner Region of Western in EU projects: “REMOMED” (INTERREG IIIB MEDOCC) “PROMPT” (INTERREG IVC). Her professional experience highlights Interim Managing Authority of the Region of Western Greece, responsible for the management of the Cohesion Fund (EU funds) for the Region. (solid waste projects); Consultant–Risk Assessment–Management; Design, Surveillance of studies & transportation projects (Cut & Cover), hydraulic and environmental projects; Site supervision and management expertise; Teaching in Vocational Training Institute. Courses in the Section of Designing systems through PC, design by AutoCad surfaces and volumes and photorealism. Natassa currently works in Intermediate Managing Authority, Region of Western Greece.

Alan Rhodes is the Victorian Fire Services Commissioner’s Manager of Policy and Strategic Projects. This role focuses on public safety and community resilience, reviewing and developing policy, and aligning agency activities with policy objectives. Recently, Alan has been reviewing and evaluating Victoria’s Bushfire Safety Policy Framework. His qualifications include B.Ed. and Masters of Evaluation and Assessment (University of Melbourne). Alan worked for 17 years for the Victorian Country Fire Authority (CFA), in community education and development, community safety research and program evaluation. In more recent years, Alan has also been a researcher with the Bushfire Cooperative Research Centre, developing methodology for evaluating programs designed to enhance public safety in wildfires. Alan also is, or has been, a member of the Victorian Fire Ready Executive Group; the Victorian Disaster Resilience Taskforce; and the Australasian Fire and Emergency Service Authorities Council (AFAC) Community Safety Group.

Robert L. Ryan, ASLA is a Professor at the Department of Landscape Architecture and Regional Planning, University of Massachusetts, Amherst where he teaches courses on landscape planning, environment and behavior, and research methods. He holds a Ph.D. in Natural Resources (Environment and Behavior Concentration), Master in Landscape Architecture and Master of Urban Planning degrees from the University of Michigan and Bachelor of Science in Landscape Architecture from California Polytechnic State University, San Luis Obispo. Dr. Ryan is a registered landscape architect in the state of California where he practiced for seven years as a planner and landscape architect. His research interests include landscape preference, place attachment and public attitudes toward natural resources planning and management in both rural and urban areas. He is the co-author with Rachel and Stephen Kaplan of the book, *With People in Mind: Design and Management of Everyday Nature* (Island Press, 1998).

Kerry Sakariassen was the Community Development Officer for the Tasmania Fire Service’s (TFS) Community Education Unit, employed in 2008 to further the work being done to address community safety in bushfires. Kerry was involved in the implementation of the Bushfire Ready Communities Tasmania Pilot and sought to help

communities develop their own local strategies for bushfire safety. Kerry worked with communities to facilitate specifically tailored and community initiated activities to promote more sustainable and effective community bushfire preparedness behaviour. In this way community members were empowered to take collective responsibility for their own development and collective bushfire safety. Approaches thus included the development of ongoing structures and processes that communities could use to identify and address their own issues, needs, and problems, in ways most appropriate to their own local conditions and circumstances.

Alok Saxena is an Indian Forest Service officer with 29 years of experience working in a wide variety of fields related to forestry and wildlife. He has worked extensively in areas related to monitoring forest fire and assessment of damage using geospatial tools, application of remote sensing and GIS in natural resource management, biodiversity conservation, coastal zone management and Island biodiversity. He has a M.Sc in Biochemistry, and completed his Ph.D. degree from Central Drug Research Institute, Lucknow in 1983, and then obtained an MBA degree from Indira Gandhi National Open University with specialization in Human Resource Management. Carrying out research has been his passion. He has many research publications in a wide variety of fields like biochemistry, forest fire, climate change, mangroves, coral reefs, assessment of natural resources etc. He has participated and presented papers in a number of national and international seminars and conferences. Presently, he is working as Additional Director at the Indira Gandhi National Forest Academy, Dehradun (India) where he is involved in the capacity building of Indian Forest Officers.

Hannah Shand is currently training as a clinical psychologist. As an Honours student at the University of Tasmania, she undertook research on social predictors of wildfire preparedness in communities in northern Portugal.

Miguel Castillo Soto is a Forest Engineer, University of Chile (1998) has a Post Degree in Applied Cartography, UTEM (2002), a Master of Geography, University of Chile (2006), and a Ph.D. in progress, University of Cordoba, Spain. He is a Professor and Researcher of Forest Fire Laboratory (Faculty of Forestry and Nature Conservation), University of Chile since 1999. He is an author of national and international publications related to the design and implementation of management tools for fire management, as well as in the modeling of phenomena related to fire behavior in the damage and the quantification of economic and territorial effects caused by forest fires. He has been Professor of the School of Forestry (Geographic Information Systems (GIS), Fire Management and Planning), and also in graduate school (specialization courses in GIS and Remote Sensing). A professional consultant and professor of specialized courses in the protection and fire management for national and international companies, he currently serves as a researcher at the Forest Fire Laboratory, University of Chile.

Fantina Tedim is a geographer and holds a master and a Ph.D. in Human Geography. She is currently Assistant Professor at the Geography Department, Faculty of Arts, University of Porto, Portugal. In 2007, she began her research on risk management and has been developing work related with the impacts of tsunamis, the management of flood risk, coastal areas vulnerability and the social dimensions of wildfire risk. She has been involved in several projects funded namely by the European Commission and FCT-Portuguese Science Foundation. Her current research focuses on methods to assess vulnerability and resilience as predictive concepts using a multi-hazard approach (e.g., wildfires, floods, coastal erosion, tsunamis, and landslides) and at different spatial scales. She is also interested in the development of tools to answer the needs of policymakers and end users in the operationalization of vulnerability and resilience concepts.

Mark Wamsley is a freelance writer and consultant working in the field of environmental communications. He holds masters degrees in applied anthropology and landscape architecture, and is currently a Ph.D. candidate in Communication at the University of Massachusetts, Amherst. His interests in people's understanding of their surroundings and conflicts over natural resources have led to varied pursuits, including the promotion of social science research and community conservation efforts at the U.S. Environmental Protection Agency, and producing content for interpretive signage and an award-winning cultural landscape study for the U.S. National Park Service. He has spent the last five years working with rural communities as a program and outreach coordinator for The Trustees of Reservations, the oldest statewide conservation organization in the United States.

Athanasios Ziliaskopoulos has been a Professor of Mechanical and Industrial Engineering at the University of Thessaly since 2003. Also from April 2010, he is President and CEO of the TPAINOSE, Greek Railway company. Before then he was tenured Associate Professor at Northwestern University, Evanston, IL. He established the Systems Optimization Laboratory in 2004 and since then he has managed to competitively secure numerous projects from the European Union, the United States, the Greek Government and Industry. He is an Associate Editor in *Transportation Science* (an INFORMS Transport and Logistics Journal), *Networks and Spatial Economics*, *Transportation Research Part B* among other journals. He has published over 50 papers in refereed journals and numerous reports and conference proceedings. He is active with INFORMS and TRB's transport security and logistics chapters. He is also active with various committees of the European Commission."

PREFACE

Throughout the world, and particularly in the United States, Southern Europe and Australia, the incidence of large scale, damaging wildfire hazard events is increasing. Current forecasts suggest that, in the context of climate change, the incidence of wildfire events, their distribution, intensity, frequency and duration will increase. At the same time, growing population movement and development in the wildland-urban interface or peri-urban zone is increasing the risk posed by wildfire events and their consequences to all sectors of society. Recognition of this growing risk has highlighted a need to develop people's capacity to adapt to annually-occurring events that could increase in frequency and severity over the coming years and decades.

Despite the attention and financial resources devoted to trying to encourage public wildfire preparedness, the goal of ensuring sustained levels of adoption of protective measures in communities susceptible to experiencing wildfire hazard consequences has proved elusive. This book examines why this is so and identifies ways in which sustained levels of preparedness can be facilitated.

The contents of this book reviews the findings of substantial research programs being conducted in the United States, Australia, Europe, India and South America and translates these findings into a format that can be used by fire and other government agencies responsible for wildfire mitigation and risk management to design effective risk communication and readiness strategies in at-risk communities. This book provides an integrated account of how, when faced with complex, uncertain and potentially highly threatening wildfire events societal, cultural, family and personal factors that interact and change over time influence how people make choices about how to manage risk. In particular, this book undertakes calls for wildfire risk management programs to be built on principles of shared responsibility and discusses the research and practical issues that need to be accommodated in putting this idea into practice.

Douglas Paton and Fantina Tedim

CONTENTS

	<i>Page</i>
<i>Preface</i>	xiii
 <i>Chapter</i>	
1. WILDFIRE PREPAREDNESS AND RESILIENCE IN COMMUNITY CONTEXTS: ISSUES AND PERSPECTIVES	3
<i>Douglas Paton and Fantina Tedim</i>	
Introduction	3
People in the Landscape	5
Cultural, Social and Personal Influences on Wildfire Risk	7
References	13
2. SOCIALLY DISASTROUS LANDSCAPE FIRES IN SOUTHEASTERN AUSTRALIA: IMPACTS, RESPONSES, IMPLICATIONS	14
<i>Malcolm Gill and Geoffrey J. Cary</i>	
Introduction	14
Setting the Stage: Socially Disastrous Fire Episodes	16
The People	18
Impacts and Implications	22
Health and Well-Being	22
Social Dislocation: Blame, Litigation	24
Learning from Experience	25
Shared Responsibility, Integration of Effort	26
A Changing Fire and Social World	27

Discussion and Conclusion	27
Acknowledgments	29

WILDFIRE AND COMMUNITY

Chapter 1

WILDFIRE PREPAREDNESS AND RESILIENCE IN COMMUNITY CONTEXTS: ISSUES AND PERSPECTIVES

DOUGLAS PATON AND FANTINA TEDIM

INTRODUCTION

This book is about the relationships people have with hazards that are variously called wildfires, forest fires and bushfires depending on which part of the world one finds oneself in. To simplify nomenclature, the term *wildfire* will be used throughout this book. Wildfires represent a growing threat to environments, to people and communities and to societies worldwide. These problems have been most noticeable in the United States, Southern Europe and Australia (e.g., as a result of recent catastrophic events in Australia, California, and Greece) where research and public scrutiny has been greatest. However, as the contents of this text attest, a need for a better understanding of wildfires and how wildfire risk can be effectively and sustainably managed is also required in South America and India. Developing such understanding and capability is becoming a more pressing issue in all these countries.

Current forecasts suggest that, particularly in the context of climate change phenomena, the incidence of large scale, damaging wildfire hazard events, their intensity, their frequency and their duration will increase (e.g., Nicholls & Lucas, 2007). Furthermore, it can be anticipated that climate change will affect the distribution of wildfire risk and result in their emerging on the hazard-scape of some areas and,

possibly, some countries, for the first time. At the same time, factors such as population growth, migration (e.g., into the peri-urban or wildland-urban interface zone) and infrastructure development will increase the scale and consequences of the losses that could potentially occur from wildfire events and contribute to the development of progressively more complex risk management contexts. Thus, in many parts of the world, climatic change, land use change and population dynamics are interacting to change and increase the risk posed by wildfire hazards to contemporary societies.

Recognition of these changes and their implications calls for risk management concepts and strategies to include the people who live with, contribute to and can assist with the management of wildfire risk and who can be affected by and have to recover from wildfire events. Consequently, managing wildfire risk calls for greater understanding of the role people, communities and societal factors play in the origins and nature of the risk wildfire poses, how this risk has developed and how it may change over time. It calls for greater attention to be paid to developing household, community and societal capacity to anticipate, mitigate, cope with, adapt to, and recover from events that are likely to increase in frequency and severity over the coming years and decades (Paton, 2006). It is thus becoming increasingly important to consider the contributions to risk emanating from the social domain.

The need to actively pursue this understanding derives from the fact that despite the attention and financial resources devoted to wildfire risk management over several decades, the goal of ensuring the sustained adoption of the kinds of mitigation and protective measures that scientific and expert sources believe to be crucial to promoting community safety has proved elusive. Consequently, new insights are required if this state of affairs is to be remedied.

The contents of this book review and summarize the findings of substantive research programs on the social dimensions of wildfire risk being conducted in the United States, Australia, Portugal, India, Chile, Greece and Cyprus. The contributors bring considerable intellectual rigor to bear on their identification of the personal, social, societal, environmental and ecological factors that influence both people's interpretation of wildfire risk and the choices they make about how to manage their risk. The work described by the authors provide a foundation for presenting evidence-based strategies that can be used by fire and other government and non-governmental agencies responsible for

wildfire mitigation and risk management to design effective mitigation, risk communication and community outreach programs for use in communities that live with the spectre of wildfires.

PEOPLE IN THE LANDSCAPE

The systematic examination of these issues commences in Chapter 2 where Gill and Cary adopt an Antipodean perspective to begin the process of unraveling the complex web of factors that need to be accommodated in the process of understanding wildfire risk and developing effective ways of managing that risk which includes social and human elements in conceptualizations of wildfire ecology. Risk management is often portrayed as a stable and constant factor. Not so, according to Gill and Cary. They argue for conceptualizations of wildfire risk to be placed within physical and temporal contexts in which both positive and negative consequences can arise from dynamic interdependencies between people, societies and the environments that exist and which change over time (Paton, 2006). They also introduce the need for conceptualizations of wildfire risk to accommodate diverse populations (which range from firesetters to directly and indirectly affected publics to the professionals and volunteers who manage and fight fires) whose actions, needs and outcomes make substantial contributions to the complexity of wildfire risk management and result in the creation of social impacts that range from health and well-being, loss and recovery, social relocation, to blame attributions and litigation. Gill and Cary conclude by highlighting the importance of learning from infrequent events and issue a challenge to researchers and practitioners to be able to use the knowledge so obtained to facilitate adaptive capacity in other communities.

The importance of conceptualizing wildfire risk from a social-ecological perspective (Paton, Kelly & Doherty, 2006) is further developed in Chapter 3. Collins focuses attention on developing a landscape typology of wildfire risk and situates this discussion in the context of wildfires in Arizona. In addition to discussing the usual vulnerability suspects (e.g., demographics, socioeconomic status, and cultural preferences), by embedding discussion in a political-ecology perspective, Collins introduces how environmental values in transition introduce new sources of vulnerability that arise from changes in livelihood and

environmental interaction (e.g., the relative balance of ranching versus second home development) over time. Collins discusses these changes in relation to the concepts of marginalization (e.g., how the political ecology can exclude less powerful groups) and facilitation (e.g., how the political ecological context can assist more powerful entities to exploit natural amenities). Using a multi-method study of diverse communities in Arizona, Collins demonstrates how marginalization and facilitation influence people's vulnerability through the decisions and actions of community institutions (e.g., real estate, land-use decision-makers). This arises from, for example, a combination of developers capitalizing on opportunities to build homes in attractive, but highly fire-prone areas and government planning institutions promoting these choices. This demonstration of how the relationship between hazards and residents can be mediated by social institutions provides a good example of how interdependencies between people and communities change over time in ways that can affect levels of risk and how it is distributed by empowering or disempowering decision-making and action. The importance of this work can be traced to growing recognition that the quality of the relationship between people and societal institutions makes a unique and important contribution risk management (Paton, 2008). Collins argues that while wildfire risk management could be enhanced by transferring responsibility to local planners, decisions at this level can conflict with and be overridden by real estate interests and lifestyle residents in a growth-based political economy. Vulnerability is thus sustained by the political economy prevailing within a jurisdiction.

Chapter 4 sees Tedim continue the systematic, holistic exploration of vulnerability in ways that complement the socioenvironmental approach introduced by Collins. Tedim approaches this topic by first discussing the confusion inherent in how the term vulnerability is used in the literature. Following a discussion of the methodological challenges (e.g., scale of analysis, stakeholder participation) inherent in this area of research, she argues for the need for a multi-dimensional approach to developing a comprehensive set of vulnerability indicators for use in wildfire risk management. This discussion is framed in relation to the outcomes of the European Methods for the Improvement of Vulnerability Assessment in Europe (MOVE) project and culminates in a discussion of the development and application of her ideas using case studies from Portugal.

The exploration of European perspectives on wildfire risk management is further expounded in Chapter 5. Michos and Pyrgaki introduce how the findings of another European initiative, the PRoMPt project, developed in the context of identifying the limited involvement members of the public have had in the planning and implementation of activities such as safety guidelines, preparedness, managing psychological aspects of response and evacuation, and social and environmental restoration. Michos and Pyrgaki use a case study approach that draws on best practice examples from throughout Europe to identify, analyze and evaluate good practice in areas ranging from risk communication to emergency management to natural habitat recovery. They conclude by discussing the benchmarking processes that can be used to demonstrate the practical utility of strategies identified in the case studies.

The literature on wildfire risk has been dominated by events and research being conducted in the United States, Australia and Europe. The next two chapters illustrate that these continents do not have a monopoly on either fire or the development of insightful perspectives on the nature and management of wildfire risk. In Chapter 6, Soto and Alvear bring a South American (Chile) perspective to researching wildland-urban interface fires. They echo the sentiments of Gill and Cary, Collins and Tedim in arguing for the need for multi-dimensional approaches to conceptualizing and managing risk in this context. They use this discussion to develop a suite of mitigation strategies that include resident participation in structural and local risk management strategies (e.g., developing fire breaks, pruning) in ways that sustain environmental amenities.

An important theme that has permeated the preceding chapters is appreciation of the fact that people and communities cannot be regarded as passive victims of wildfire. Subsequent chapters complement the perspectives offered by the preceding authors by adding cultural, social, and personal perspectives to understanding wildfire risk and its management.

CULTURAL, SOCIAL AND PERSONAL INFLUENCES ON WILDFIRE RISK

In Chapter 7, Saxena presents a discussion of wildfire risk management in India. Saxena adds to the inventory of issues that need to

be accommodated in the development of a comprehensive understanding of wildfire risk and its management by introducing the important role of fire in the cultural and religious life of people. He then proceeds to discuss contemporary uses of fire and the consequent human contribution to wildfire causation in India that can be traced to livelihood-related activities. Saxena uses the identification of the ever-increasing risk of fire in India to discuss community-based wildfire management strategies and how government initiatives complement those at the local level in areas ranging from community participation and engagement to legislation. Of particular interest is the work being undertaken that specifically focuses on women. Saxena concludes with a discussion of how culturally-embedded risk management activities are being undertaken under the Joint Forest Management Initiative (JFM) to integrate risk management strategies in culturally oriented ways. The exploration of how risk can be influenced by the interaction between wildfire and livelihood is pursued from a different perspective in the next chapter.

Set against the backdrop of the catastrophic fires in Greece and Cyprus in 2007, Chapter 8 sees Boutras, Boukas, Katsaros and Ziliaskopoulos discussing the environmental, social, and economic impacts that ensued from these events. This work adds countries situated in and around the northeastern Mediterranean coast to the geographical areas covered in this book. In addition to covering the special circumstances that prevail in small rural and mountain communities, Boutras and colleagues call for crisis management and tourism issues to be seen as deserving more pivotal positions in wildfire risk management and recovery planning that has hitherto been the case. One outcome of doing so is greater appreciation of the importance of anticipating and preparing for wildfire events.

While the causes of wildfire events may not always be open to human influence, the nature, distribution, extent and duration of the consequences wildfires create are. The systematic discussion of what people can do to manage their risk commences in Chapter 9 where Rhodes talks about preparedness in relation to the fundamental choices people are called upon to make; to stay or to go. Rhodes discusses how the media-coined term “stay or go” emerged to encapsulate the “prepare, stay and defend or leave early” policy that has played a prominent role in how community preparedness is conceptualized in Aus-
